

## COVID-19 Update July 23, 2020

As of **July 22, 2020, at 8:30 PM**, the total of laboratory-confirmed and probable COVID-19 cases reported among Connecticut residents is **48232**, including **46213** laboratory-confirmed and **2019** probable cases. **Seventy-two** patients are currently hospitalized with laboratory-confirmed COVID-19. There have been **4410** COVID-19-associated deaths.

In Connecticut during the early months of this pandemic, it became clear that it would be necessary to track probable COVID-19 cases and deaths, in addition to laboratory-confirmed (RT-PCR) cases and deaths. This was needed to better measure the burden and impact of this disease in our communities and is now part of the [national surveillance case definition for COVID-19](#). Probable cases of COVID-19 involve persons who have not had confirmatory laboratory testing (RT-PCR) performed for COVID-19, but whose symptoms indicate they are likely to have a COVID-19 infection. In Connecticut, most of the probable COVID-19 cases involve persons whose death certificates list COVID-19 disease or SARS-CoV-2 as a cause of death or a significant condition contributing to death. Prior to June 1, probable and confirmed cases were reported together.

Overall Summary	Total**	Change Since Yesterday
COVID-19 Cases	48232	+83*
COVID-19-Associated Deaths	4410	+4
Patients Currently Hospitalized with COVID-19	72	+9
COVID-19 PCR Tests Reported	685869	+13483

*\*Please note 83 new cases were reported to DPH since yesterday. In addition, 74 previously reported cases were removed due to updated laboratory findings of false positive results.*

*\*\*Includes confirmed plus probable cases*

### COVID-19 Cases and Associated Deaths by County of Residence

As of 07/22/20 8:30pm.

County	COVID-19 Cases		COVID-19-Associated Deaths	
	Confirmed	Probable	Confirmed	Probable
Fairfield County	16529	655	1089	312
Hartford County	11455	690	1090	318
Litchfield County	1462	68	117	21
Middlesex County	1300	60	150	38
New Haven County	12433	402	943	150
New London County	1290	62	76	26
Tolland County	871	66	51	14
Windham County	648	7	14	1
Pending address validation	225	9	0	0
<b>Total</b>	<b>46213</b>	<b>2019</b>	<b>3530</b>	<b>880</b>

[National COVID-19 statistics](#) and information about [preventing spread of COVID-19](#) are available from the Centers for Disease Control and Prevention.

**Day-to-day changes reflect newly reported cases, deaths, and tests that occurred over the last several days to week.** All data in this report are preliminary; data for previous dates will be updated as new reports are received and data errors are corrected. Hospitalization data were collected by the Connecticut Hospital Association. Deaths reported to either OCME or DPH are included in the daily COVID-19 update.

## COVID-19 Cases and Deaths Over Time

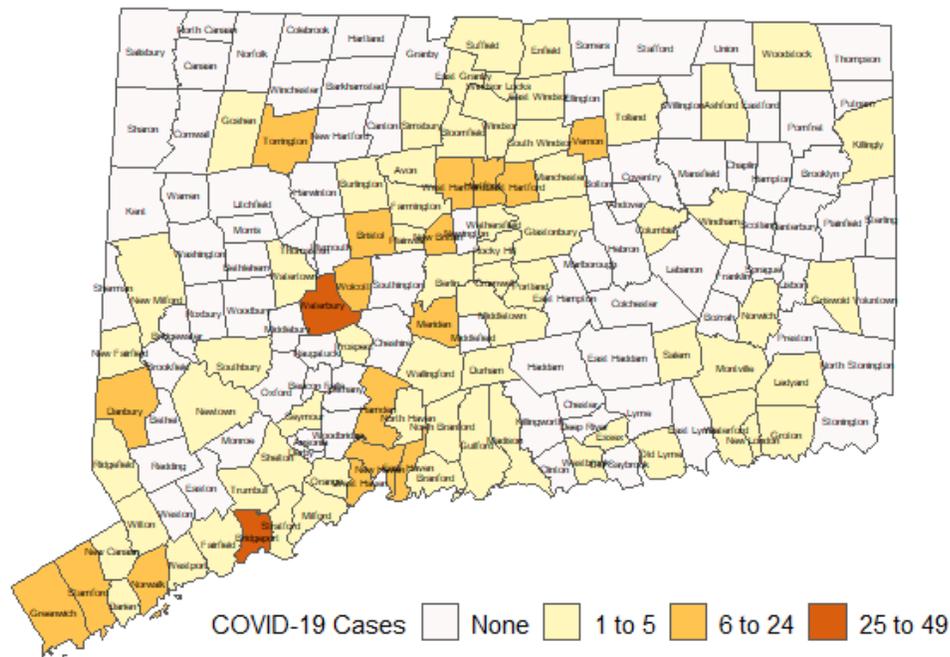

### New Cases during July 12-18<sup>th</sup>, 2020

Among 59,665 PCR tests for COVID-19 with specimen collection date during July 12–18<sup>th</sup>, 561 test results were positive. There were 425 people who tested positive for the first time or had onset of symptoms during July 12-18<sup>th</sup>. Of these 425 people, 399 (94%) cases were among people who reside in community settings and 26 (6%) were among people who reside in congregate settings, including nursing homes, assisted living facilities, or correctional facilities.

The maps below show the distribution of the 399 cases among people living in community settings. The first map shows the number of cases and darker colors indicate towns with more cases.

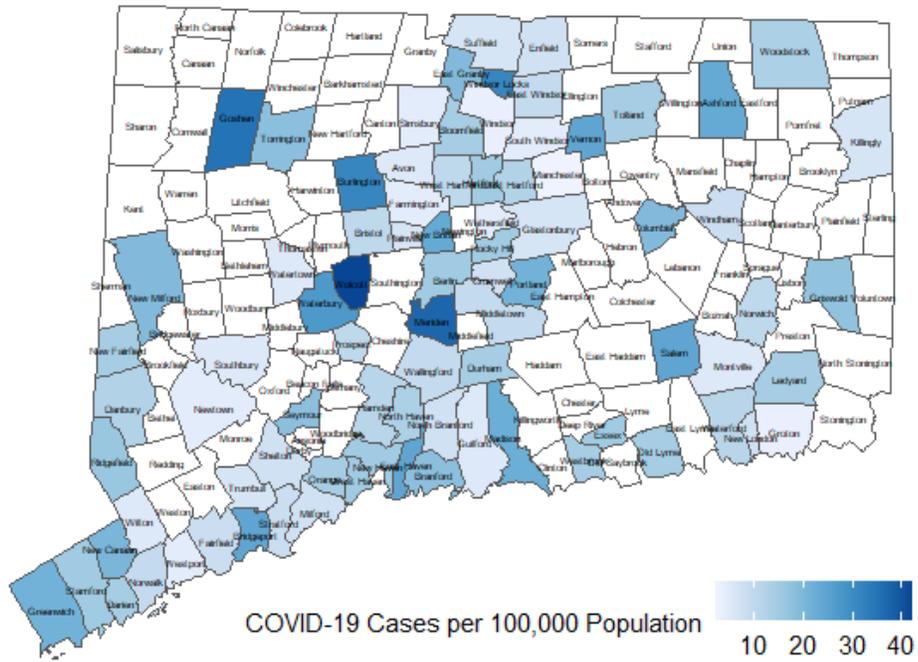

Because towns with larger populations are likely to have more cases, it is also important to look at the number of new cases per 100,000 population. The second map below shows the number of new cases per 100,000 population, with darker colors indicating higher rates.

**Number of COVID-19 Cases among Persons Living in Community Settings by Town with Specimen Collection or Onset Date During July 12-18**

*Map does not include 16 cases pending address validation*

**Rate of COVID-19 Cases among Persons Living in Community Settings per 100,000 Population by Town with Specimen Collection or Onset Date During July 12-18**

*Map does not include 16 cases pending address validation*

**Population, Number and Rate of COVID-19 Cases among Persons Living in Community Settings by Town with Specimen Collection or Onset Date during July 12-18<sup>th</sup>, 2020**

*Table does not include 16 cases pending address validation. Rate is cases per 100,000 population.*

## Weekly Incidence by County

The chart below shows the number of new COVID-19 cases per week per 100,000 population in the state of Connecticut and for each Connecticut county. The rates in this chart are calculated by dividing the number of new cases diagnosed each week by the annual estimated population and then multiplying by 100,000. The rate calculation used here is consistent with the [CDC COVID-19 Data Tracker](#) method for calculation of cumulative COVID-19 incidence rates.

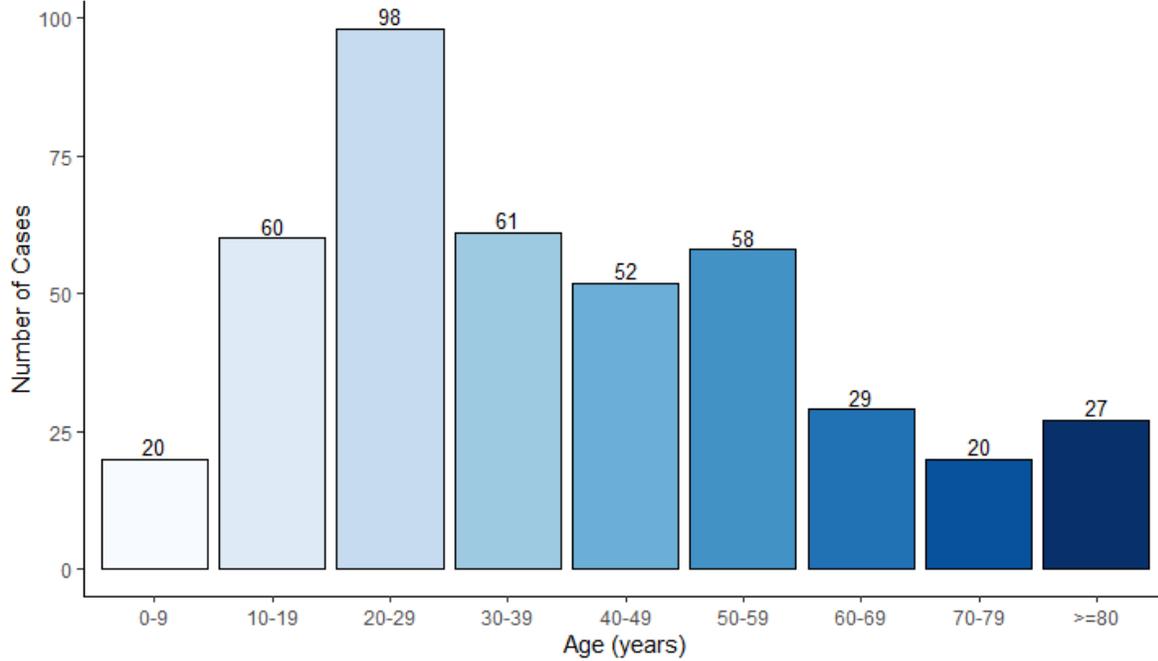

**Notes:**

Incidence rates are based on weekly cases divided by the estimated annual population and multiplied by 100,000. Cases pending address validation are excluded from rate calculations.

### Age Distribution of COVID-19 Cases with Specimen Collection or Onset During July 12-18, 2020

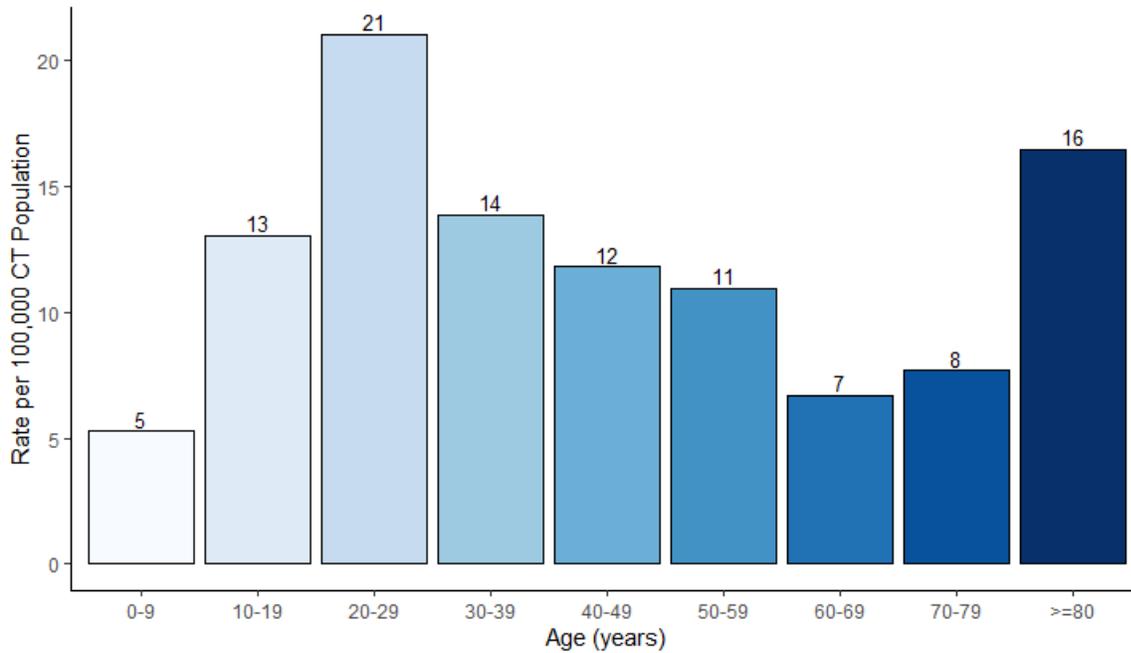

Number of New COVID-19 Cases by Age Group with Collection or Onset during July 12-18

As of 07/22/2020 at 8:30pm

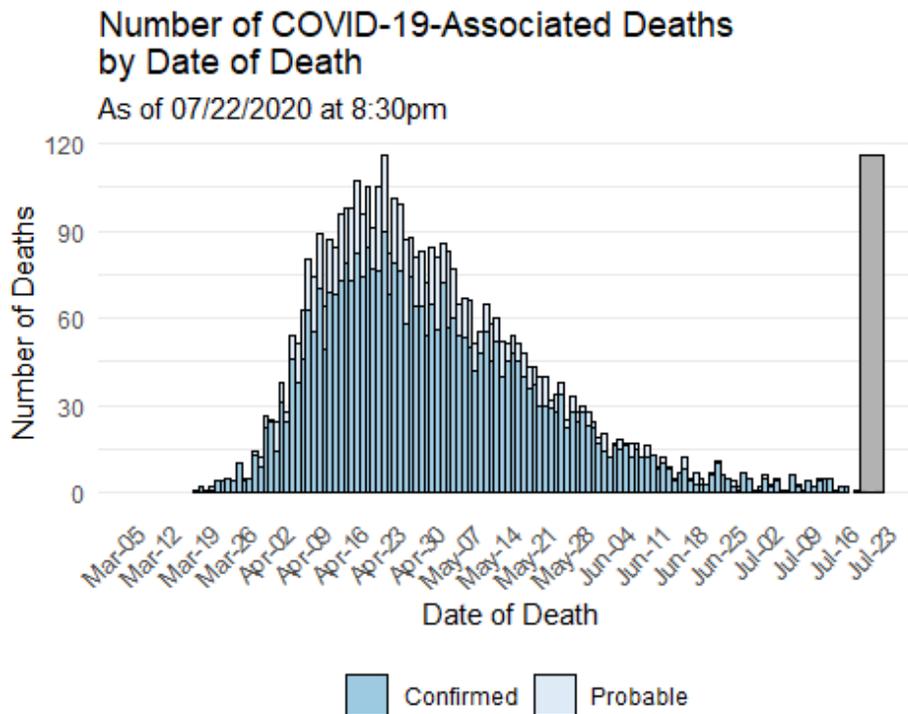

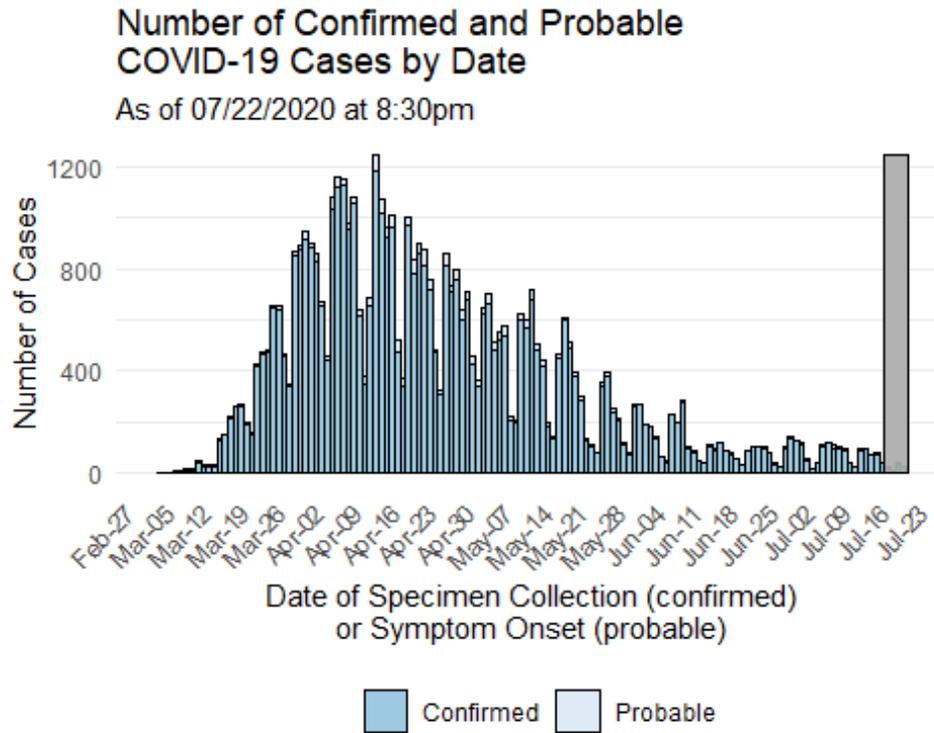

Rate of COVID-19 Cases by Age Group with Collection or Onset during July 12-18

As of 07/22/2020 at 8:30pm

## Cumulative COVID-19 Cases and COVID-19-Associated Deaths by Date

Test results may be reported several days after the date of collection. Data are incomplete for most recent dates shaded in grey. Data from previous dates are routinely updated.

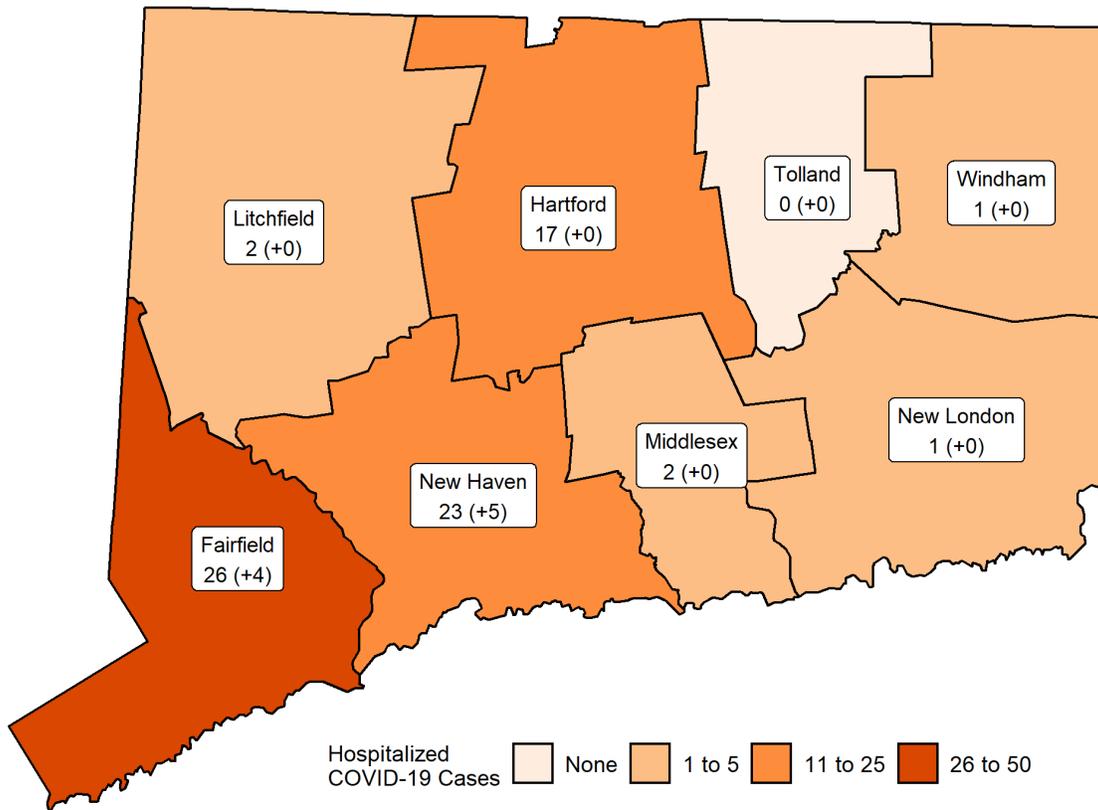

All data are preliminary and subject to change. Updated 7/23/2020.

## Hospitalization Surveillance

The map below shows the number of patients currently hospitalized with laboratory-confirmed COVID-19 by county based on data collected by the Connecticut Hospital Association. The distribution is by location of hospital, not patient residence. The labels indicate the number of patients currently hospitalized with the change since yesterday in parentheses.

### Patients Currently Hospitalized by Connecticut County

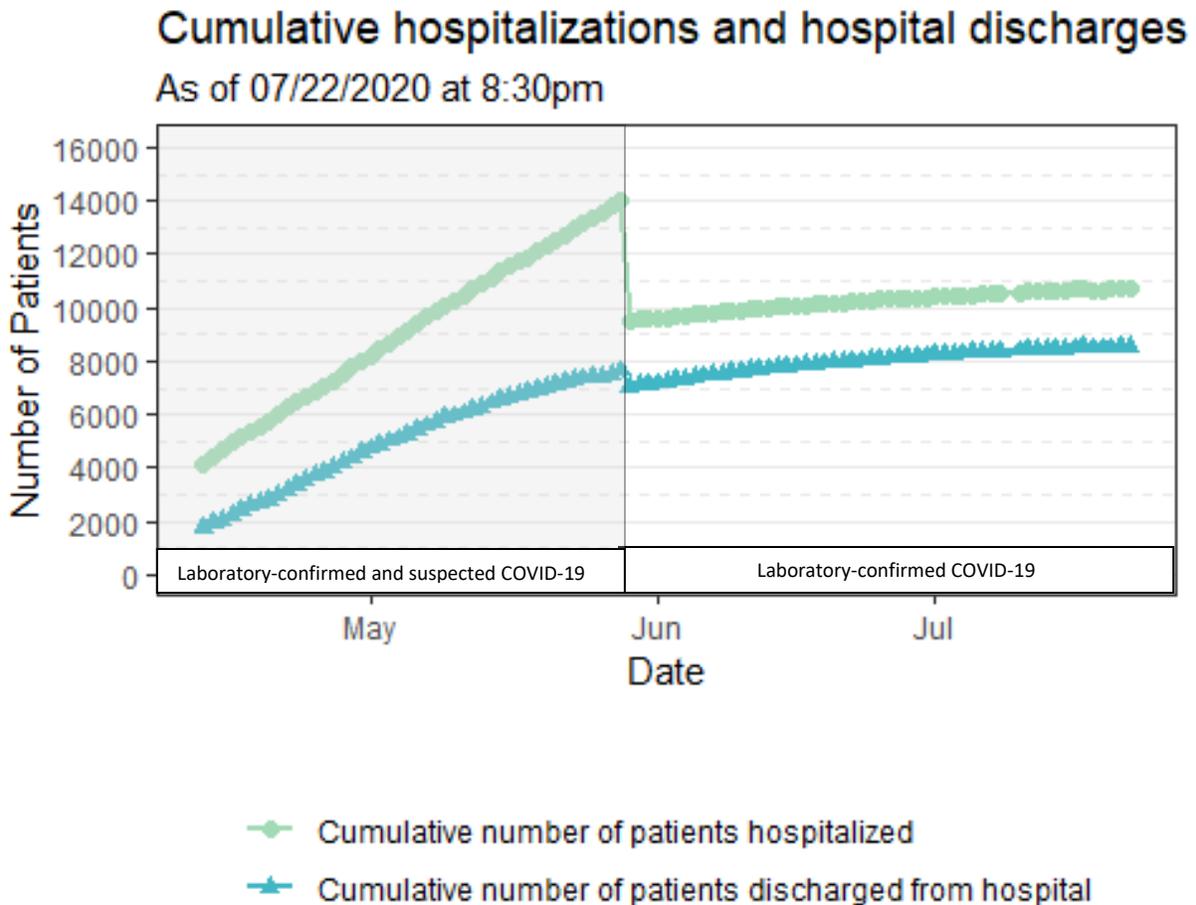

*Distribution by location of hospital not patient residence. Data from the Connecticut Hospital Association.*

More information about hospitalized cases of COVID-19 in New Haven and Middlesex Counties is available from [COVID-NET](#).

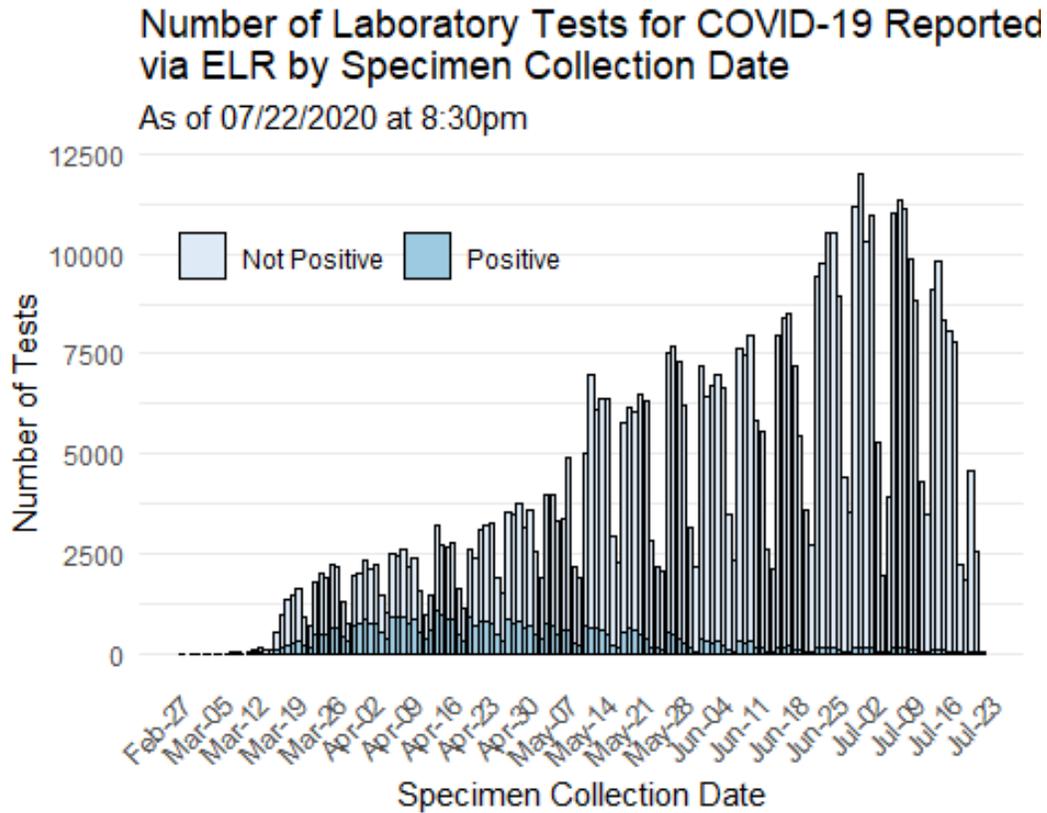

## Cumulative hospitalizations and cumulative hospital discharges for COVID-19

The chart below shows information on cumulative hospitalizations and hospital discharges for patients with COVID-19. Data were collected by the Connecticut Hospital Association. Starting on May 29, 2020, CHA changed to reporting only the number of patients with laboratory-confirmed COVID-19; data for previous dates include patients with laboratory-confirmed or suspected COVID-19. To date, **10712** patients have been hospitalized with laboratory-confirmed COVID-19 in Connecticut and **8516** patients hospitalized with laboratory-confirmed have been discharged.

## Laboratory Surveillance

To date, DPH has received reports on a total of 685869 COVID-19 laboratory tests; of these 585717 test results were received via electronic laboratory reporting (ELR) methods from commercial laboratories, hospital laboratories, and the Dr. Katherine A. Kelley State Public Health Laboratory. The chart below shows the number of tests reported via ELR by date of specimen collection and test result.

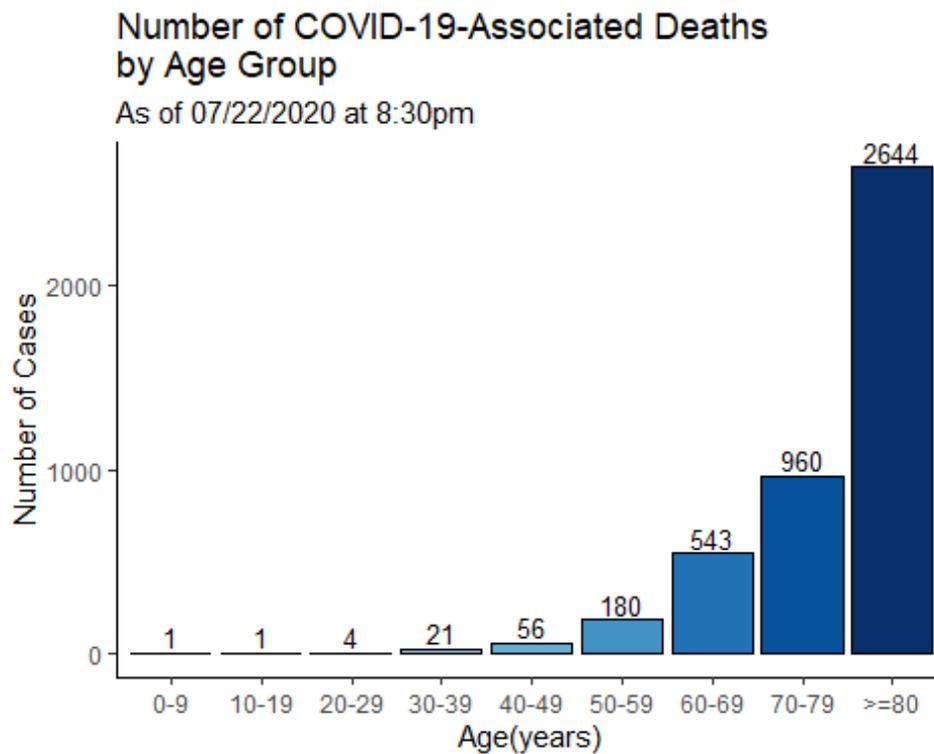

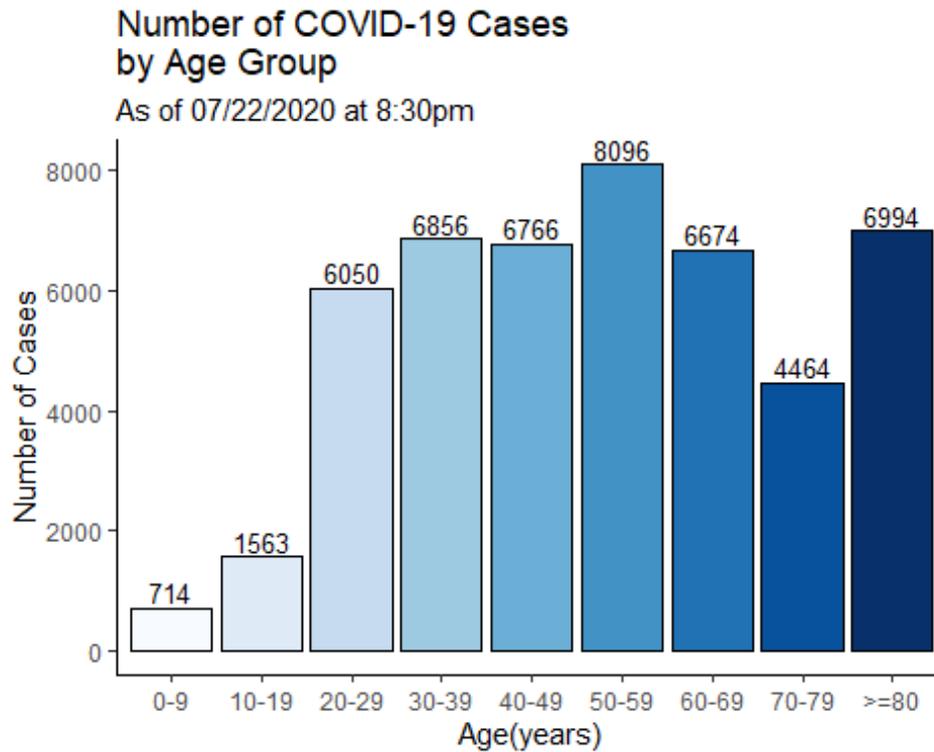

Testing of specimens collected since July 16 is ongoing and does not reflect a decrease in testing. Chart only includes test results received by electronic laboratory reporting.

ELR = Electronic Laboratory Reporting

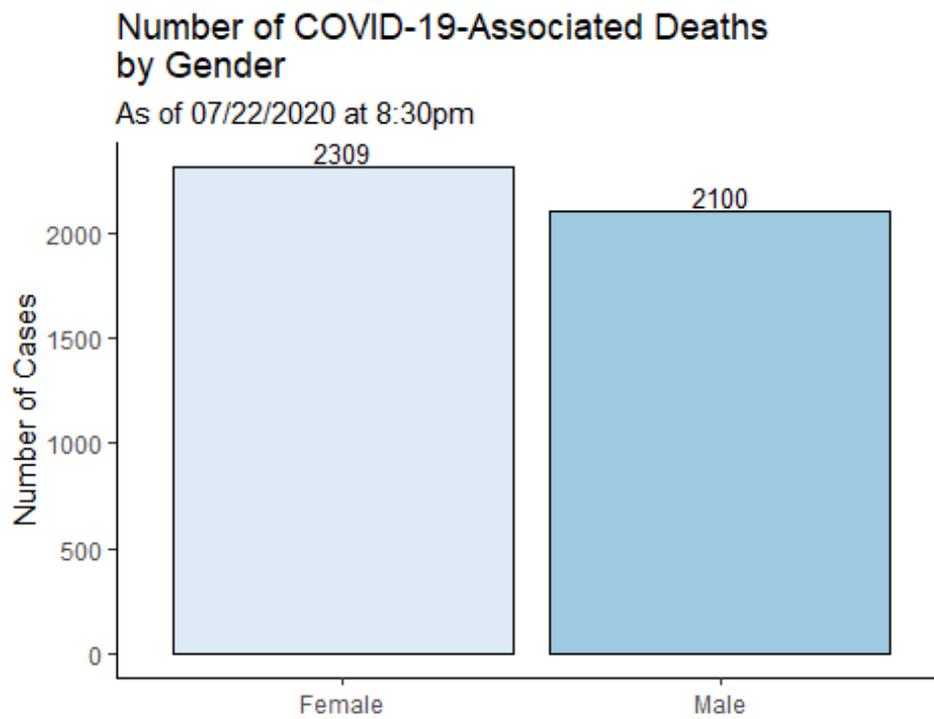

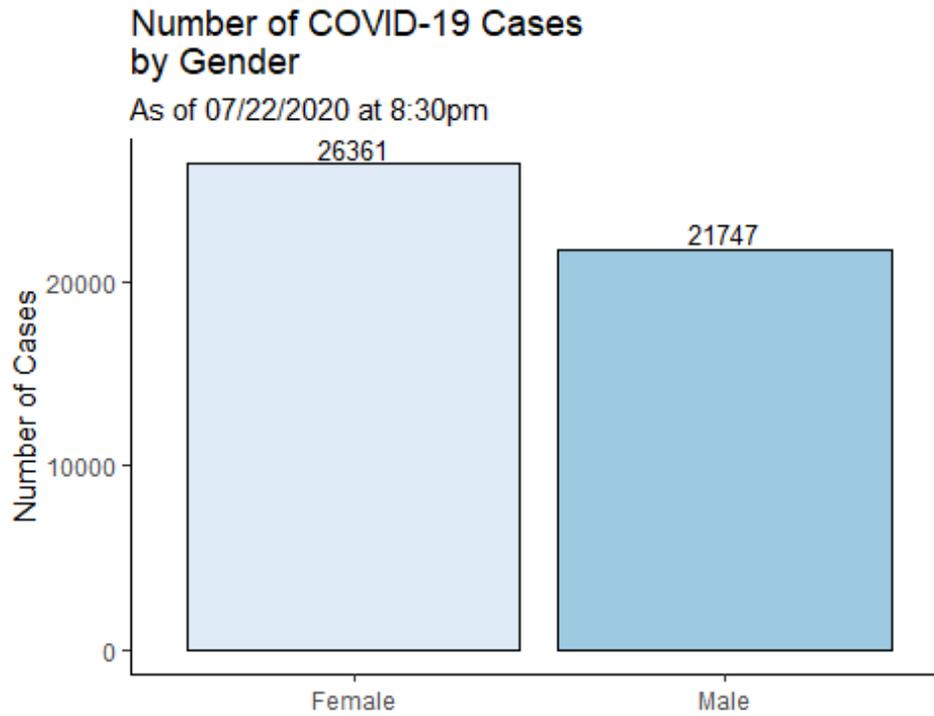

## Characteristics of COVID-19 Cases and Associated Deaths

Counts may not add up to total case count because demographic data may be missing.

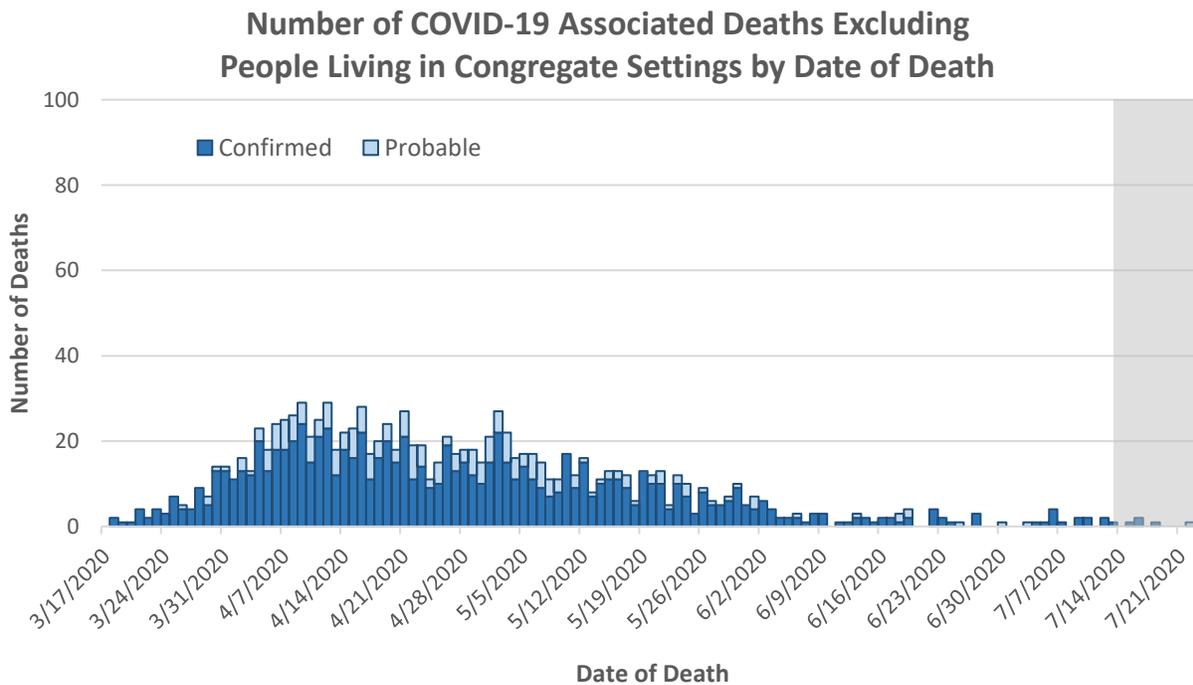

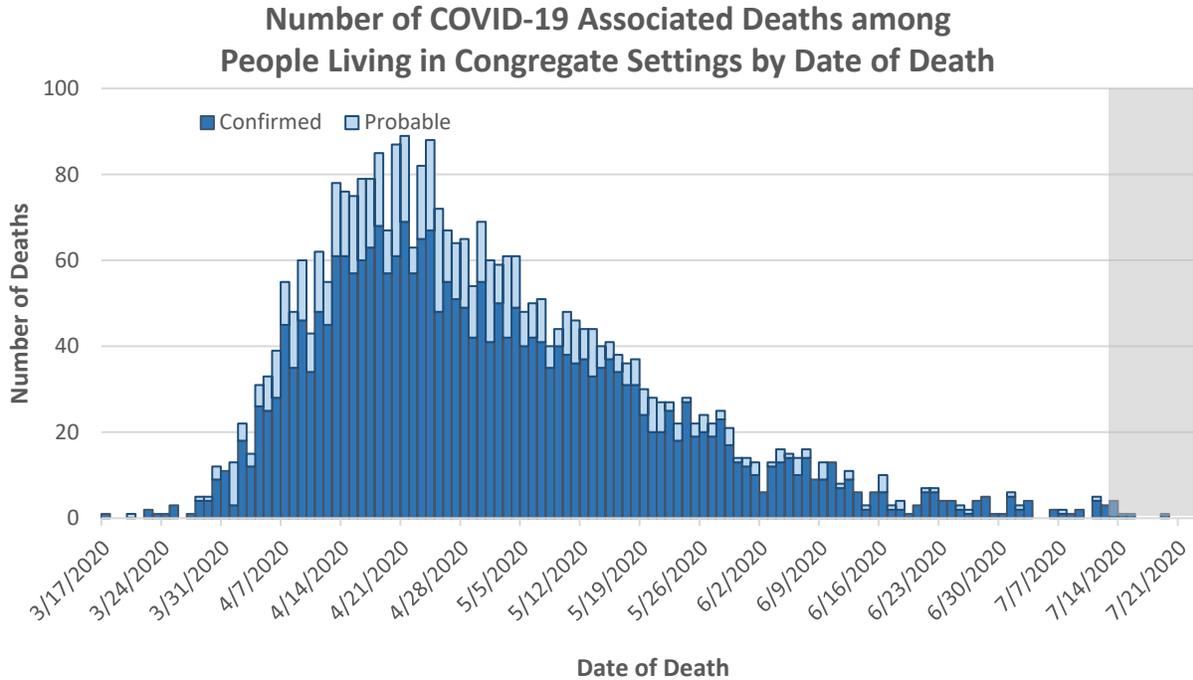

All data are preliminary and subject to change. Updated 7/23/2020.

Counts may not add up to total case count because demographic data may be missing.

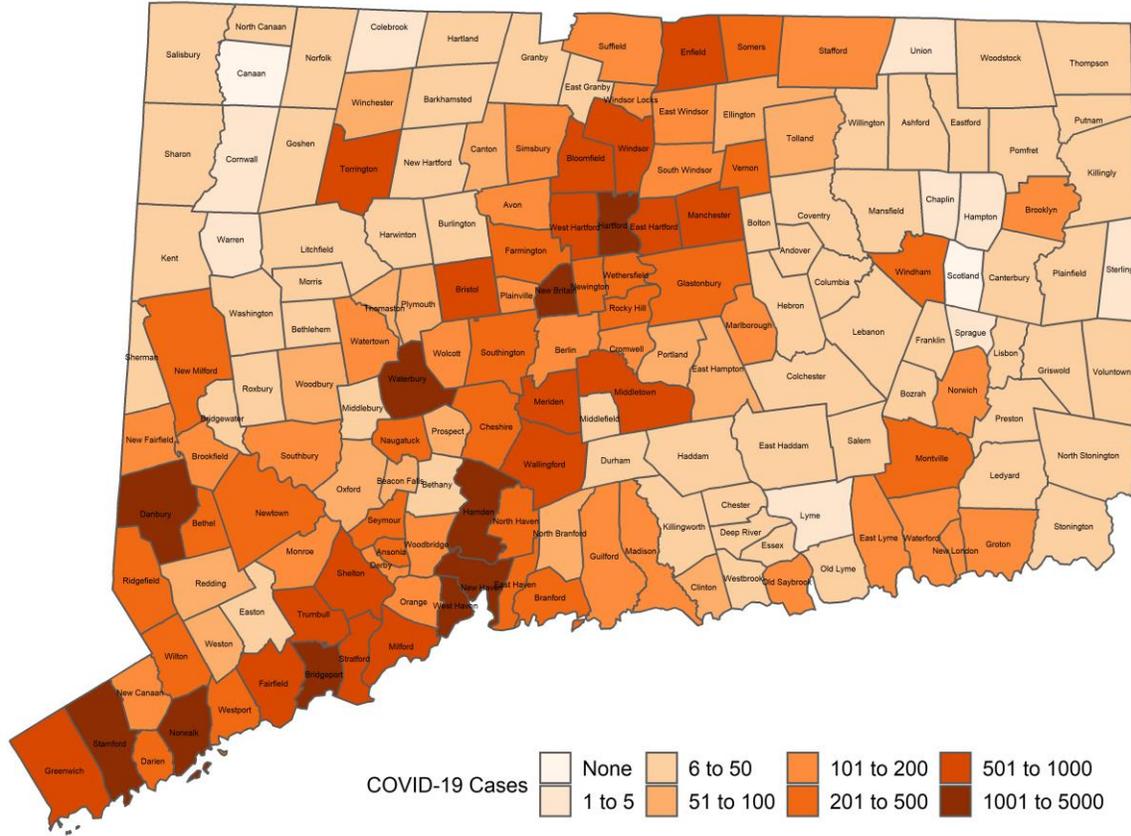

The graphs below show the number of COVID-19-associated deaths by date among people living in congregate settings, such as nursing homes, assisted living facilities, and prisons/jails (first graph) and among people who are not residents of congregate settings (second graph). *Data are incomplete for most recent dates shaded in grey. Data from previous dates are routinely updated.*

All data are preliminary and subject to change. Updated 7/23/2020.

## Cumulative Number of COVID-19 Cases by Town

Map does not include 225 cases pending address validation

All data are preliminary and subject to change. Updated 7/23/2020.

**APPENDIX B.** The following graphs show the number of cases per 100,000 Connecticut residents statewide and by county, age group, and gender. Population estimate from: [DPH Population Statistics](#)

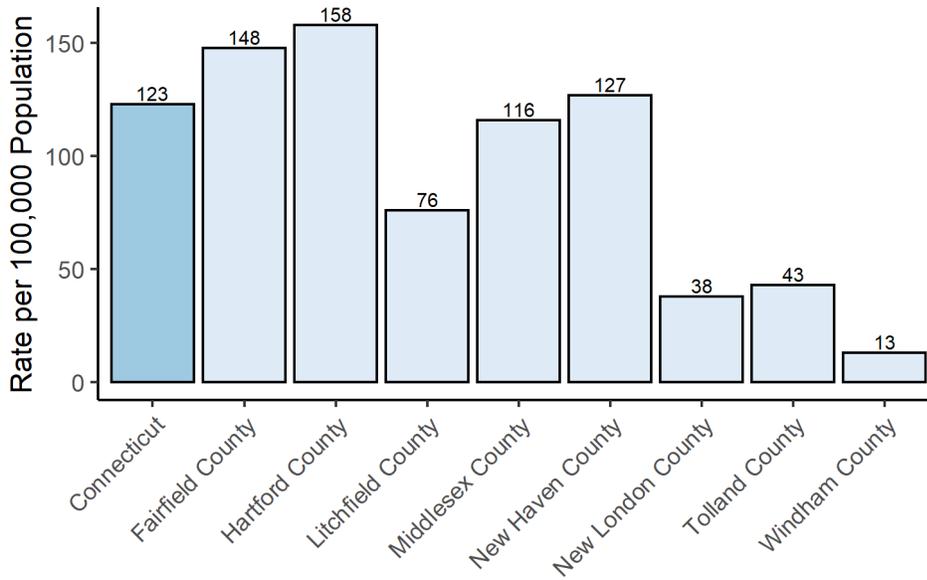

### Rate of COVID-19 Cases Statewide and by County

As of 07/22/2020 at 8:30pm

### Rate of COVID-19-Associated Deaths Statewide and by County

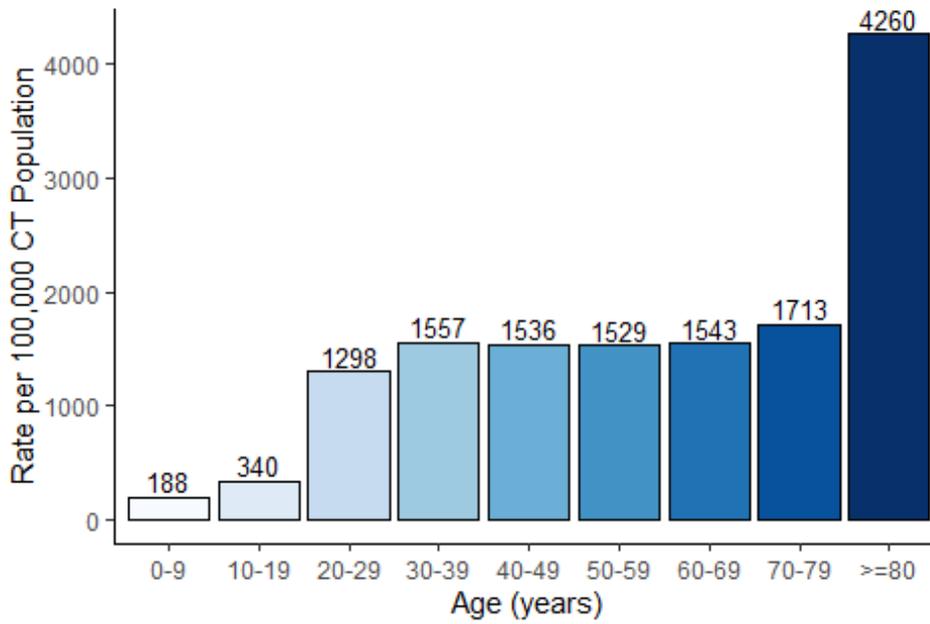

As of 07/22/2020 at 8:30pm

All data are preliminary and subject to change. Updated 7/23/2020.

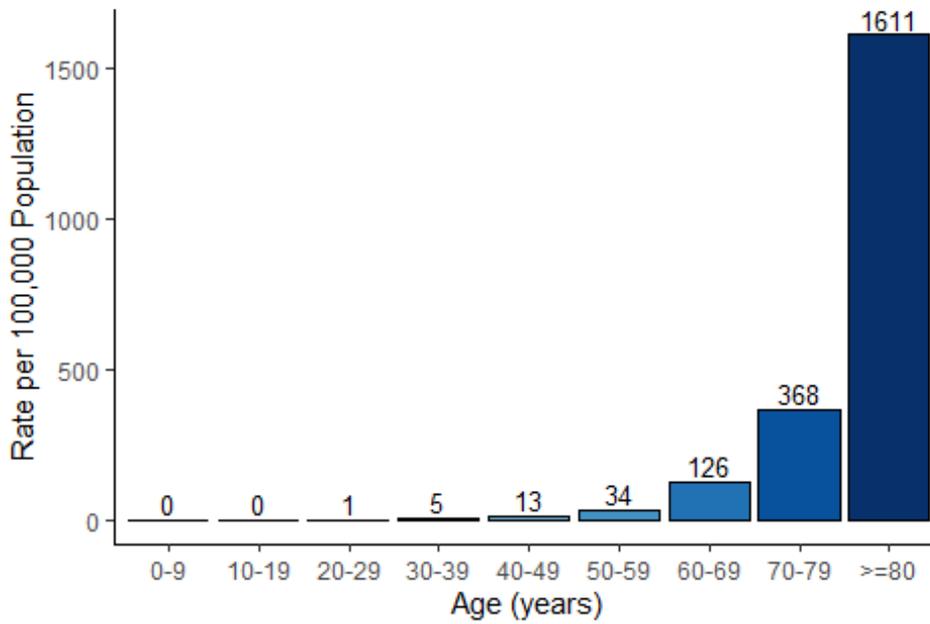

### Rate of COVID-19 Cases by Age Group

As of 07/22/2020 at 8:30pm

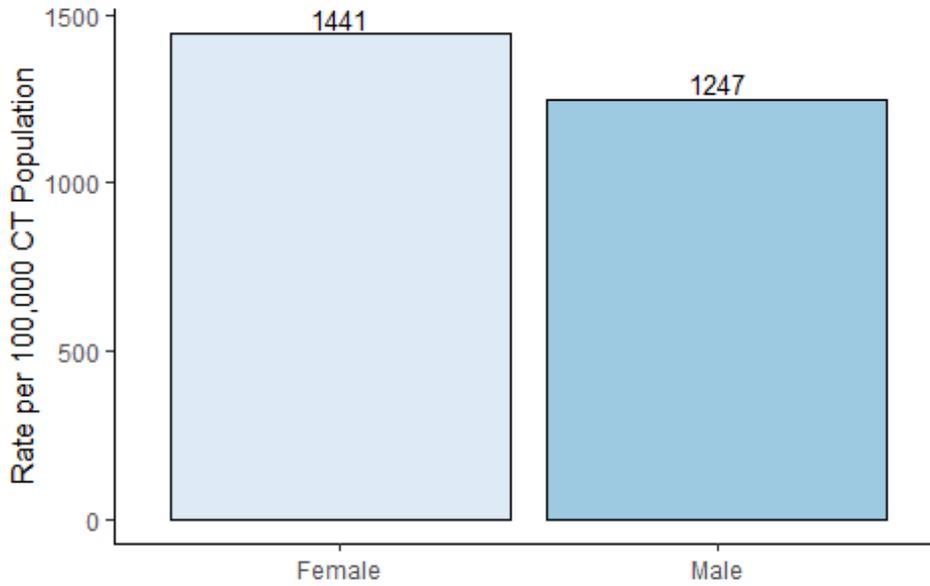

### Rate of COVID-19-Associated Deaths by Age Group

As of 07/22/2020 at 8:30pm

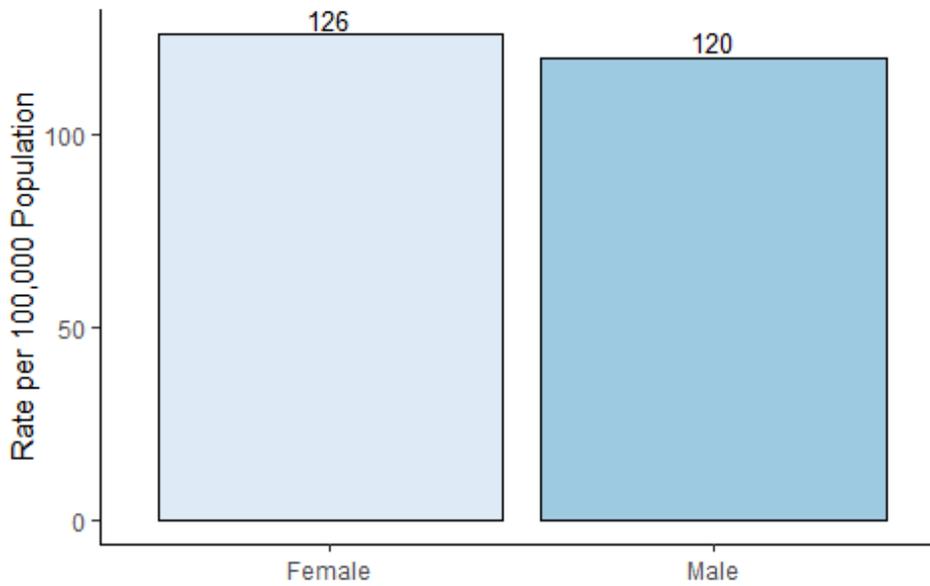

### Rate of COVID-19 Cases by Gender

As of 07/22/2020 at 8:30pm

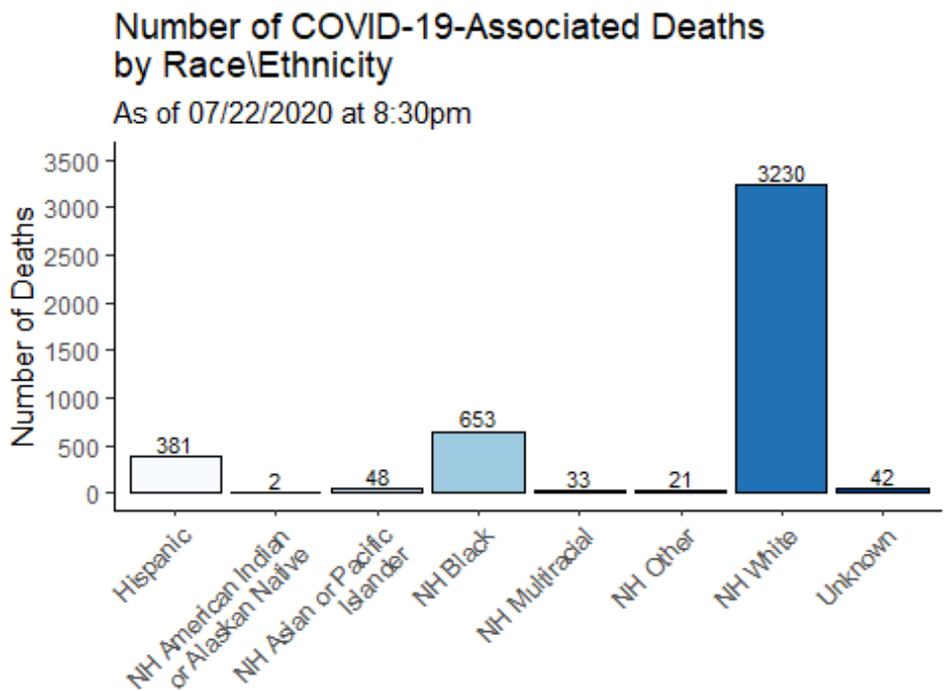

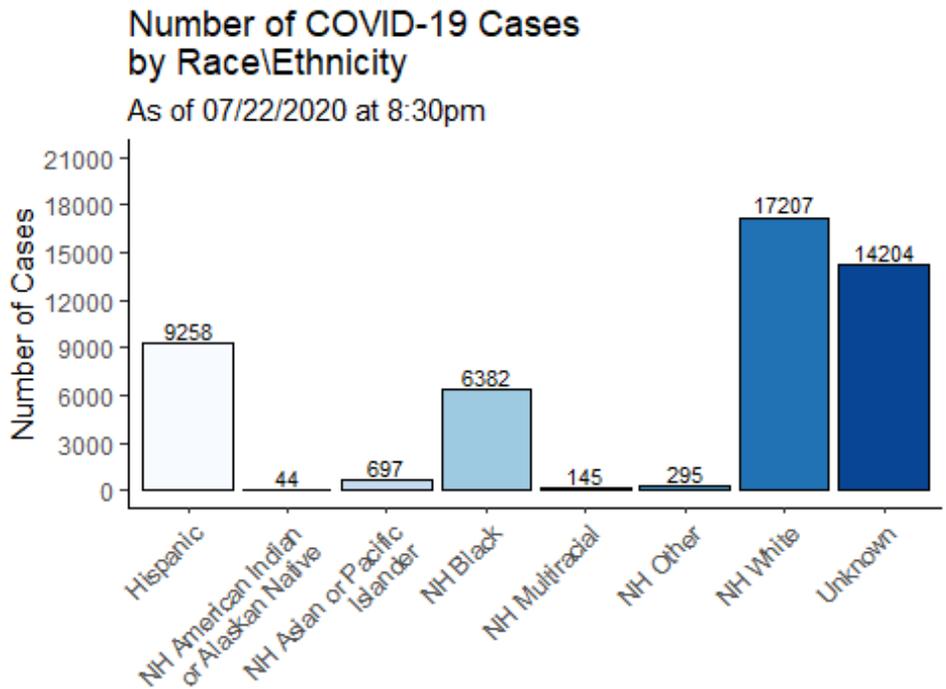

### Rate of COVID-19-Associated Deaths by Gender

As of 07/22/2020 at 8:30pm

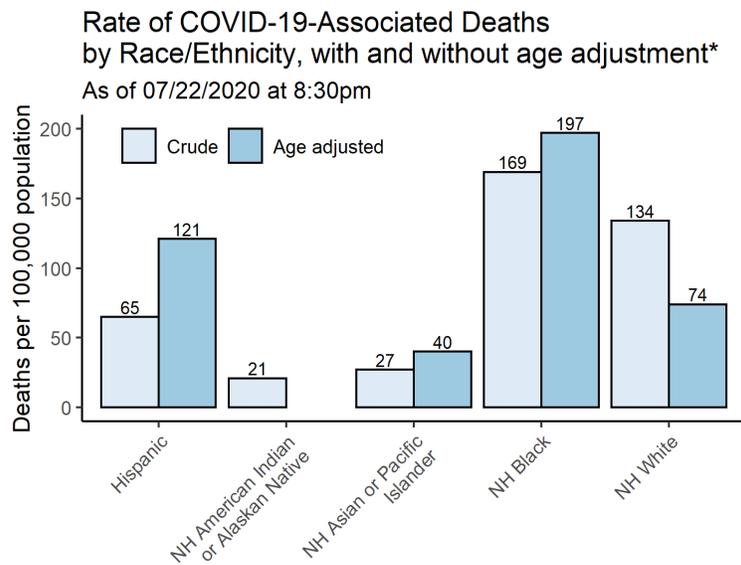

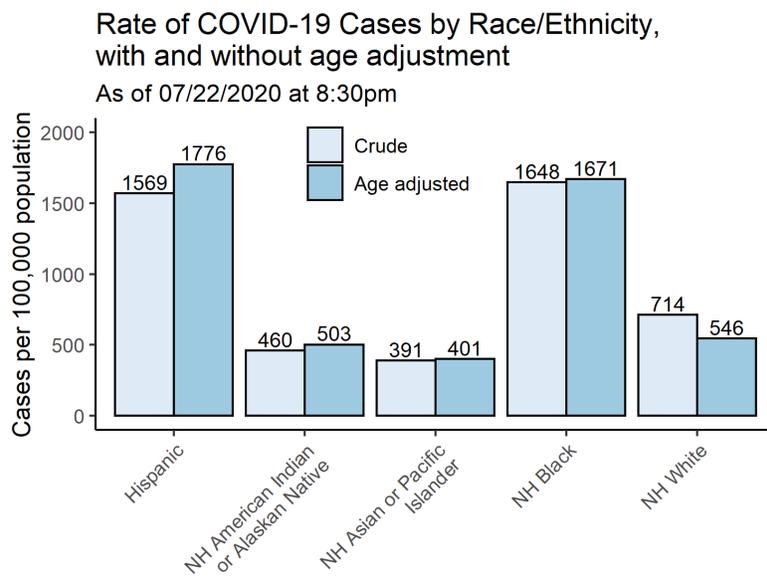

**APPENDIX C.** The following graphs show the number of cases and deaths by race and ethnicity. Categories are mutually exclusive. The category “multiracial” includes people who answered ‘yes’ to more than one race category. NH=Non-Hispanic

All data are preliminary and subject to change. Updated 7/23/2020.

The following graphs show the number of COVID-19 cases and COVID-19-associated deaths per 100,000 population by race and ethnicity. Crude rates represent the total cases or deaths per 100,000 people. Age-adjusted rates consider the age of the person at diagnosis or death when estimating the rate and use a standardized population to provide a fair comparison between population groups with different age distributions. Age-adjustment is important in Connecticut as the median age of among the non-Hispanic white population is 47 years, whereas it is 34 years among non-Hispanic blacks, and 29 years among Hispanics. Because most non-Hispanic white residents who died were over 75 years of age, the age-adjusted rates are lower than the unadjusted rates. In contrast, Hispanic residents who died tend to be younger than 75 years of age which results in higher age-adjusted rates.

The 2018 Connecticut and 2000 US Standard Million populations were used for age adjustment; population estimates from: [DPH Population Statistics](#). Categories are mutually exclusive. Cases missing data on race/ethnicity are excluded from calculation of rates. NH=Non-Hispanic

\*Age adjusted rates only calculated for groups with at least 30 deaths

All data are preliminary and subject to change. Updated 7/23/2020.
